Electrical discharge machining (EDM), also known as spark machining, spark eroding, burning, die sinking, wire burning or wire erosion, is a manufacturing process whereby a desired shape is obtained by using electrical discharges (sparks). Material is removed from the work piece by a series of rapidly recurring current discharges between two electrodes, separated by a dielectric liquid and ...

Molybdenum disulfide (MoS₂) thin-film transistors were fabricated with ion gel gate dielectrics. These thin-film transistors exhibited excellent band transport with a low threshold voltage (<1 V), high mobility (12.5 cm²/(V·s)) and a high on/off current ratio (10⁵). Furthermore, the MoS₂ transistors exhibited remarkably high mechanical flexibility, and no degradation in the electrical ...

Press Brake Terminology Air bending: The method of bending is where the material never touches the bottom of the v-die and expected to take its shape from the amount of depth penetration of the punch. American punch: The forming punch where the tang used for mounting the punch into the upper beam of the press brake is in line (centered) with the top of the punch.

We propose a new A-film-enhanced fringe field switching (A-FFS) liquid crystal display whose required d/n value is only $\lambda/4$, which is one-half of a conventional FFS. Fast response time can be achieved by either decreasing the cell gap (d) or choosing a low birefringence (n) and low-viscosity liquid crystal. The effect of d/n mismatch between A-film and FFS cell on contrast ratio is analysed.
