Fitting distributions with R 3 1.0 Introduction Fitting distributions consists in finding a mathematical function which represents in a good way a statistical variable. A statistician often is facing with this problem: he has some observations of a quantitative character x_1, x_2, \dots, x_n

Fitting distributions with R

Probability distributions: The lognormal distribution Probability density function: $f(x; \mu, \sigma) = \frac{1}{x\sigma\sqrt{2\pi}} e^{-\frac{(\ln x - \mu)^2}{2\sigma^2}}$ Figure: The lognormal distribution The lognormal distribution is a probability density function of a random variable whose logarithm is normally distributed Tasos Alexandridis Fitting data into probability distributions

Fitting distributions Concept: finding a mathematical function that represents a statistical variable, e.g. delay E.g. modelling hopcount from traceroute measurements How to proceed? 1. Guess the distribution from which the data might be drawn 2. Estimate the parameters of that distribution 3.
